

# **Wireless Temperature Sensors**

### **General Description**

The Wireless Temperature Sensor uses a type NTC thermistor to measure temperature.

- Accurate to ± 1° C (± 1.8° F)
- Increased accuracy by user calibration to ± 0.25° C (± 0.45° F)

### **Principle of Operation**

The Wireless Temperature Sensor measures the ambient thermal conditions of your environment. These sensors accurately monitor temperature changes in your physical location. Settings including notifications, alerts, reports, and maps are customizable in the online interface of Portal. The temperature sensor is built to be out of the box and running in minutes.

The Temperature Sensor is not meant for wet, damp, high humidity environments. This sensor should only be operated in dry, low humidity environments. Should you need a temperature sensor that operates at extreme temperatures and can withstand getting wet or condensed on, please consider our Thermocouple Sensors.

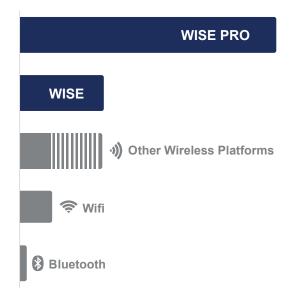

### **Example Applications**

- Ambient temperature monitoring
- Environmental monitoring
- Smart machines & smart structures
- · HVAC operation & testing
- · Data center monitoring
- · Many additional applications

#### **Commercial Grade Sensors**

Commercial grade sensors are designed for applications in ordinary environments (normal room temperature, humidity and atmospheric pressure). Do not use these sensors under the following conditions as these factors can deteriorate the product characteristics and cause failures and burnout.

- Corrosive gas or deoxidizing gas: chlorine gas, hydrogen sulfide gas, ammonia gas, sulfuric acid gas, nitric oxides gas, etc.
- · Volatile or flammable gas
- · Dusty conditions
- Low-pressure or high-pressure environments
- · Wet or excessively humid locations
- Places with salt water, oils chemical liquids or organic solvents
- · Where there are excessively strong vibrations
- · Other places where similar hazardous conditions exist

Use these products within the specified temperature range. Higher temperature may cause deterioration of the characteristics or the material quality.

## Industrial Grade Sensors | Type 1, 2, 4, 4X, 12 and 13 NEMA Rated Enclosure

Industrial sensors are enclosed in reliable, weatherproof NEMA-rated enclosures. Our NEMA-rated enclosures are constructed for both indoor or outdoor use and protect the sensor circuitry against the ingress of solid foreign objects like dust as well as the damaging effects of water (rain, sleet, snow, splashing water, and hose-directed water).

- · Safe from falling dirt
- · Protects against wind-blown dust
- · Protects against rain, sleet, snow, splashing water, and hose-directed water
- · Increased level of corrosion resistance
- · Will remain undamaged by ice formation on the enclosure
